An Au Sable River System
**CEDAR TREE PLANTING
AND PROTECTION PROJECT**

Au Sable River and Manistee River Property Owners

Are you aware of the absence of young cedars along the banks of the Au Sable and Manistee rivers?

The northern white-cedars along the river's banks provide needed shade to maintain the cold water fishery of the Au Sable and Manistee rivers. The presence of the cedar sweepers at the water line provides protection for the fish, as well as provides for the preservation of the riverbank. However, due to the tremendous deer population there is virtually no natural regrowth of northern white-cedars along the Au Sable and Manistee rivers.

Just think what the Au Sable and Manistee rivers would look like in the future without these majestic cedars along its path.

To ensure the establishment of northern white-cedar trees on your property, we need your help to plant and protect cedar seedlings.

These cedar seedlings will begin the reforestation of the natural cedars that have been consumed by the large local deer and hare population for the past several decades.

Volunteer members of the The Au Sable River Property Owners Association (ARPOA) will pre-package northern white-cedar seedlings into a "planting kit". Included in this planting kit will be: 10 northern white-cedar seedlings, protective fencing material, wooden stakes, and complete planting instructions.

Planting kits may be ordered by mail or online (through July 31st) at a cost of \$35.00 each. Detailed information will be mailed directly to you. The kit(s) will be available for planting in September.
